

"AllTheMods9 Digital Miner Not Working (Ores/Etc.)"

Example

Doesn't work where you'd type in ore* as the tag and it would mine all ores in that area but now it's coming up with "no matching targets", It also doesn't seem to be letting me type in caps so I don't know how to search for specific ores.

Forge Ores Usage

You need to open the interface, then config and then add new filter. I always use tag filter, so for example if you want quartz, type in the black field „**forge:ores/quartz**“. If done right after confirming the filter there should be a new filter in the list with a little preview of nether quartz. If you want any other ore press **F3 + H** for advanced tooltips and then hover over the ore you want in Jei and **press ctrl** to see all the tags. I think you then just need to pick a item tag that is unique.
